Service Manual

Telephone Equipment

Caller ID Compatible

(Charger Unit) Model shown is KX-TG1032.

Configuration for each model

Model No	Base Unit	Handset	Charger Unit	Expandable
KX-TG1032	1 (TG1031)	2 (TGA101)	1	Up to 6
KX-TG1033	1 (TG1031)	3 (TGA101)	2	Up to 6
KX-TG1034	1 (TG1031)	4 (TGA101)	3	Up to 6
KX-TGA101*		1 (TGA101)	1	

* KX-TGA101 is also an optional accessory, which contains a handset and a charger.

Expandable Digital Cordless Answering System

Silver Version (for U. S. A.)

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

IMPORTANT SAFETY NOTICE

There are special components used in this equipment which are important for safety. These parts are marked by \triangle in the Schematic Diagrams, Circuit Board Diagrams, Exploded Views and Replacement Parts List. It is essential that these critical parts should be replaced with manufacturer's specified parts to prevent shock, fire or other hazards. Do not modify the original design without permission of manufacturer.

· IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING

If lead free solder was used in the manufacture of this product, the printed circuit boards will be marked PbF. Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark. When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

- When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.
- The illustrations in this Service Manual may vary slightly from the actual product.

Note for TABLE OF CONTENTS:

Because sections 5, 6 and 7 of this manual are extracts from the operating instructions for this model, they are subject to change without notice. You can download and refer to the original operating instructions on TSN Server for further information.

1 Safety Precaution

1.1. For Service Technicians

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

- 1. Cover the plastic parts boxes with aluminum foil and ground them.
- 2. Ground the soldering irons.
- 3. Use a conductive mat on the worktable.
- 4. Do not touch IC or LSI pins with bare fingers.

2 Warning

2.1. Battery Caution

- 1. Danger of explosion if battery is incorrectly replaced.
- 2. Replace only with the same or equivalent type recommended by the manufacturer.
- 3. Dispose of used batteries according to the manufacture's Instructions.

2.2. About Lead Free Solder (Pbf: Pb free)

Note:

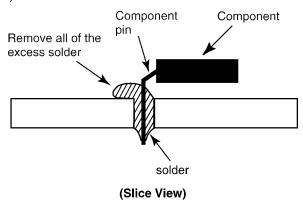

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin (Sn), Silver (Ag), and Copper (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder.

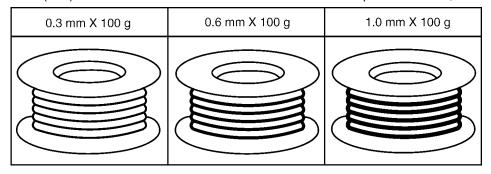

Caution

- PbF solder has a melting point that is 50 °F ~ 70 °F (30 °C ~ 40 °C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700 °F ± 20 °F (370 °C ± 10 °C).
- Exercise care while using higher temperature soldering irons.:
- Do not heat the PCB for too long time in order to prevent solder splash or damage to the PCB.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100 °F (600 °C).
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See the figure below).

2.2.1. Suggested PbF Solder

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper (Sn+Ag+Cu), you can also use Tin and Copper (Sn+Cu) or Tin, Zinc, and Bismuth (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials. The following lead free (PbF) solder wire sizes are recommended for service of this product: 0.3 mm, 0.6 mm and 1.0 mm.

3 Specifications

■ Standard:

DECT 6.0 (Digital Enhanced Cordless Telecommunications 6.0)

■ Number of channels:

60 Duplex Channels

■ Frequency range:

1.92 GHz to 1.93 GHz ■ Duplex procedure:

TDMA (Time Division Multiple Access)

■ Channel spacing:

1,728 kHz

■ Bit rate:

1,152 kbit/s

■ Modulation:

GFSK (Gaussian Frequency Shift Keying)

■ RF transmission power:

Approx. 100 mW

■ Voice coding:

ADPCM 32 kbit/s

	Base Unit	Handset	Charger

Note:

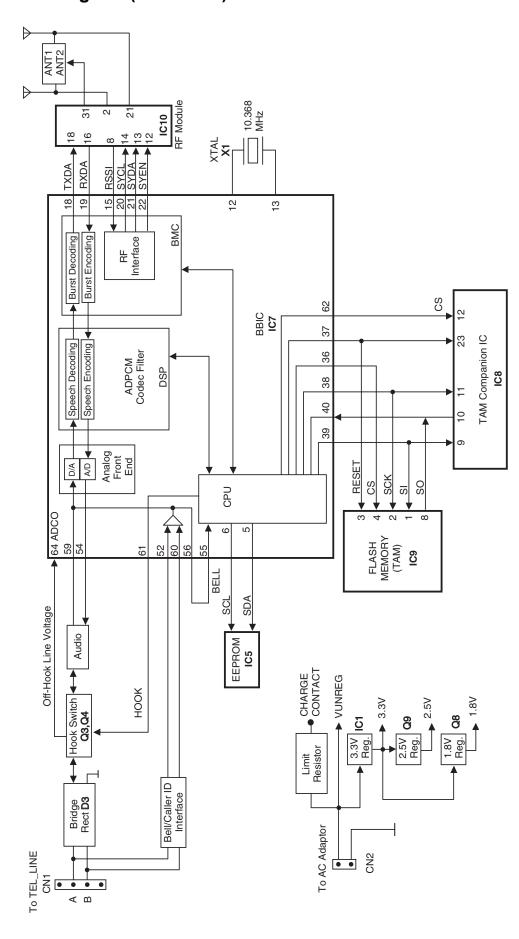

• Design and specifications are subject to change without notice.

Note for Service:

• Optional headset: KX-TCA60, KX-TCA86, KX-TCA88HA, KXTCA92, KX-TCA93, KX-TCA94, or KX-TCA95

4 Technical Descriptions

4.1. Block Diagram (Base Unit)

KX-TG1032/1033/1034 BLOCK DIAGRAM (BASE UNIT)

4.2. Circuit Operation (Base Unit)

4.2.1. **Outline**

Base Unit consists of the following ICs as shown in Block Diagram (Base Unit) (P.6).

- DECT BBIC (Base Band IC): IC7
 - Handling all the audio, signal and data processing needed in a DECT base unit
 - Controlling the DECT specific physical layer and radio section (Burst Module Controller section)
 - ADPCM code filter for speech encoding and speech decoding (DSP section)
 - Echo-cancellation and Echo-suppression (DSP section)
 - Any tones (tone, sidetone, ringing tone, etc.) generation (DSP section)
 - DTMF receiver (DSP section)
 - Clock Generation for RF Module
 - ADC, DAC, timer, and power control circuitry
 - All interfaces (ex: RF module, EEPROM, LED, Analog Front End, etc.)
- RF Module: IC10
 - PLL Oscillator
 - Detector
 - Compress/Expander
 - First Mixer
 - Amplifier for transmission and reception
- EEPROM: IC5
 - Temporary operating parameters (for RF, etc.)
- FLASH MEMORY: IC9
 - Voice Prompt (TAM) D/L Area
 - ICM/OGM/MEMO Recording Area
- TAM Companion: IC8
 - Voice data compression and decompression
 - Speaker Amp
 - LED Driver
- · Additionally,
 - Power Supply Circuit (+3.3 V, +2.5 V, +1.8 V output)
 - Crystal Circuit (10.368 MHz)
 - Charge Circuit
 - Telephone Line Interface Circuit

4.2.2. Power Supply Circuit

The power is supplied to the DECT BBIC, RF Module, EEPROM and Charge Contact from AC Adaptor (+6.5 V) as shown in Fig.101. The power supply is as follows;

• DECT BBIC (IC7):

CN2 (+6.5 V) \rightarrow IC1 \rightarrow Q9 \rightarrow IC7

 $\text{CN2 (+6.5 V)} \rightarrow \text{IC1} \rightarrow \text{Q8} \rightarrow \text{IC7}$

• RF Module (IC10):

 $\text{CN2 (+6.5 V)} \rightarrow \text{IC1} \rightarrow \text{Q9} \rightarrow \text{IC10 (PLL)}$

CN2 (+6.5 V) \rightarrow IC1 \rightarrow Q10 \rightarrow IC10 (Power AMP)

• EEPROM (IC5):

CN2 (+6.5 V) \rightarrow IC1 \rightarrow Q9 \rightarrow IC5

• FLASH MEMORY (IC9):

CN2 (+6.5 V) \rightarrow IC1 \rightarrow IC9

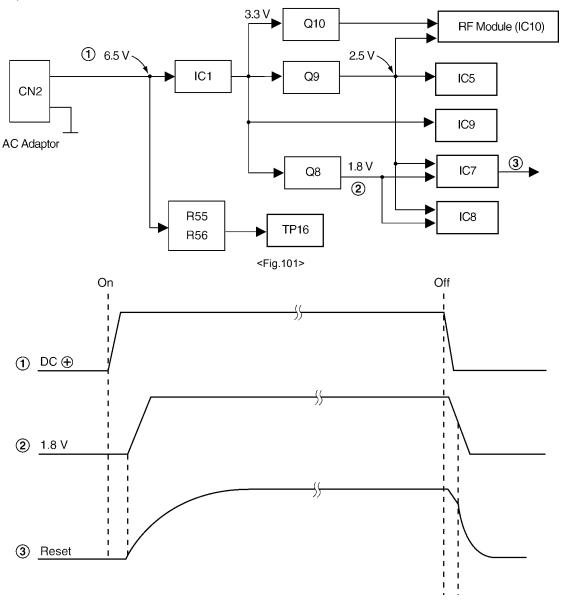

• TAM Companion (IC8):

CN2 (+6.5 V) \rightarrow IC1 \rightarrow Q9 \rightarrow IC8

CN2 (+6.5 V) \rightarrow IC1 \rightarrow Q8 \rightarrow IC8

• Charge Contact (TP16):

CN2 (+6.5 V) \rightarrow R55, R56 \rightarrow TP16

4.2.3. Telephone Line Interface

<Function>

- · Bell signal detection
- · Clip signal detection
- ON/OFF hook circuit

Bell & Clip (: Calling Line Identification Presentation: Caller ID) signal detection:

In the standby mode, Q3 is open to cut the DC loop current and decrease the ring load.

When ring voltage appears at the L1T (A) and L1R (B) leads (when the telephone rings), the AC ring voltage is transferred as follows:

- A \rightarrow C4 \rightarrow R6 \rightarrow R33 \rightarrow IC7 Pin 60 (CID INp)
- B \rightarrow C3 \rightarrow R4 \rightarrow R35 \rightarrow IC7 Pin 52 (CID INn)

ON/OFF hook circuit:

In the standby mode, Q3 is open, and connected as to cut the DC loop current and to cut the voice signal. The unit is consequently in an **on-hook condition**.

When IC7 detects a ring signal or press the TALK Key onto the handset, Q4 turns on and then Q3 turns on, thus providing an **off-hook condition** (DC current flows through the circuit) and the following signal flow makes the loop current.

• A \rightarrow D3 \rightarrow Q3 \rightarrow Q5 \rightarrow R21 \rightarrow R22 \rightarrow D3 \rightarrow B [OFF HOOK]

4.2.4. Transmitter/Receiver

· Audio Circuits and DTMF tone signal circuits.

Base Unit and Handset mainly consist of RF Module and DECT BBIC.

Base Unit and Handset transmit/receive voice signal and data signal through the antenna on carrier frequency.

Signal Path:

*Refer to Signal Route (P.13).

4.2.4.1. Transmitter Block

The voice signal input from the TEL LINE interface goes to RF Module (IC10) through DECT BBIC (IC7) as shown in **Block Diagram (Base Unit)** (P.6)

The voice signal passes through the analog part of IC7 where it is amplified and converted to a digital audio stream signal. The burst switch controller processes this stream performing encryption and scrambling, adding the various other fields to produce the GAP (**G**eneric **A**ccess **P**rofile) standard DECT frame, assigning to a time slot and channel etc.

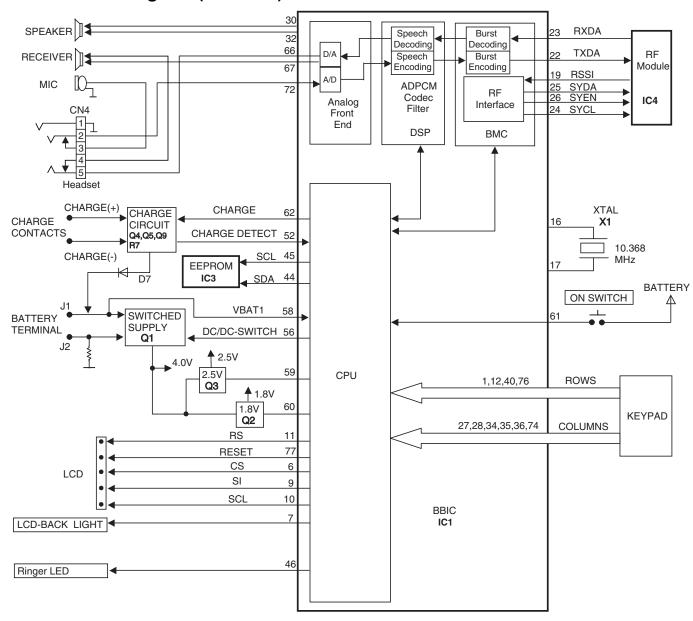

In IC10, the carrier frequency is changing, and frequency modulated RF signal is generated and amplified, and radiated from antenna. Handset detects the voice signal or data signal in the circuit same as the following explanation of Receiver Block.

4.2.4.2. Receiver Block

The signal of 1900 MHz band (1881.792 MHz ~ 1897.344 MHz) which is input from antenna is input to IC10 as shown in **Block Diagram (Base Unit)** (P.6).

In IC10, the signal of 1900 MHz band is downconverted to 864 kHz signal and demodulated, and goes to IC7 as GAP (**G**eneric **A**ccess **P**rofile) standard DECT frames. It passes through the decoding section burst switch controller where it separates out the frame information and performs de-encryption and de-scrambling as required. It then goes to the DSP section where it is turned back into analog audio. This is amplified by the analog front end, and goes to the TEL LINE Interface.

4.3. Block Diagram (Handset)

KX-TGA101 BLOCK DIAGRAM (HANDSET)

4.4. Circuit Operation (Handset)

4.4.1. **Outline**

Handset consists of the following ICs as shown in Block Diagram (Handset) (P.10).

- DECT BBIC (Base Band IC): IC1
 - All data signals (forming/analyzing ACK or CMD signal)
 - All interfaces (ex: Key, Detector Circuit, Charge, DC/DC Converter, EEPROM, LCD)
- RF Module: IC4
 - PLL Oscillator
 - Detector
 - Compress/Expander
 - Amplifier for transmission and reception
- EEPROM: IC3
 - Temporary operating parameters (for RF, etc.)

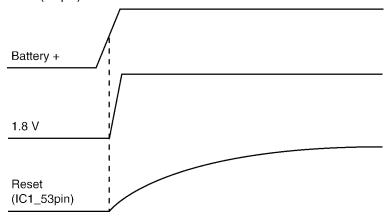

4.4.2. Power Supply Circuit/Reset Circuit

Circuit Operation:

When power on the Handset, the voltage is as follows;

BATTERY(2.2 V ~ 2.6 V: BATT+) \rightarrow F1, L1, D1 \rightarrow Q2 (1.8 V), Q3 (2.5 V), Q1 (3.3 V)

The Reset signal generates IC1 (53 pin) and 1.8 V.

4.4.3. Charge Circuit

Circuit Operation:

When charging the handset on the Base Unit, the charge current is as follows;

 $DC+(6.5 \text{ V}) \rightarrow R55, R56 \rightarrow CHARGE+(Base) \rightarrow CHARGE+(Handset) \rightarrow Q4 \rightarrow D7 \rightarrow F1 \rightarrow BATTERY+...$ Battery...

 $BATTERY- \rightarrow R45 \rightarrow GND \rightarrow CHARGE-(Handset) \rightarrow CHARGE-(Base) \rightarrow GND \rightarrow DC-(GND)$

In this way, the BBIC on Handset detects the fact that the battery is charged.

The charge current is controlled by switching Q5 of Handset.

Refer to Fig.101 in Power Supply Circuit (P.8).

4.4.4. Battery Low/Power Down Detector

Circuit Operation:

"Battery Low" and "Power Down" are detected by BBIC which check the voltage from battery.

The detected voltage is as follows;

· Battery Low

Battery voltage: V(Batt) ≤ 2.25 V ± 50 mV

The BBIC detects this level and " starts flashing.

Power Down

Battery voltage: V(Batt) ≤ 2.0 V ± 50 mV

The BBIC detects this level and power down.

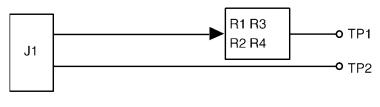

4.4.5. Speakerphone

The hands-free loudspeaker at SP+ and SP- is used to generate the ring alarm.

4.5. Circuit Operation (Charger Unit)

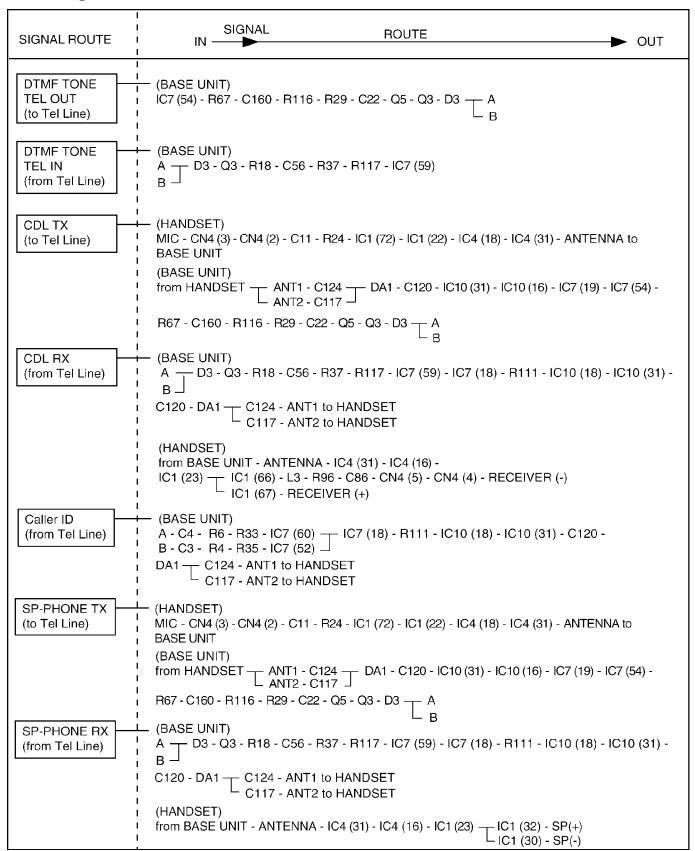

4.5.1. Power Supply Circuit

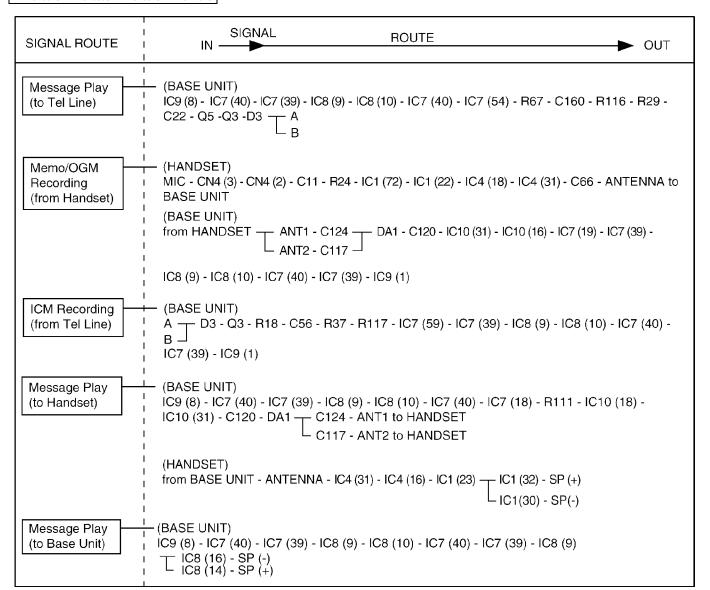

The power supply is as shown.

AC Adaptor

4.6. Signal Route

- (MUTE) [CLEAR]
- (INTERCOM) [TRANSFER]
- (i) Microphone

5.2. Display

Handset display items

Displayed item	Meaning
Ψ	Within range of the base unit When flashing: Handset is searching for base unit. (out of range of base unit, handset is not registered to base unit, no power on base unit)
TI	Battery level
Example: [1]	The handset's extension number (example shown here: handset1)
In use	Line or answering system is being used by another handset or the base unit.

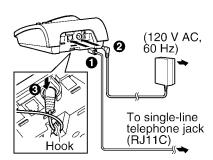

6 Installation Instructions

6.1. Setting up the Base Unit

6.1.1. Connecting the AC adaptor and telephone line cord

Connect the telephone line cord until it clicks into the base unit and telephone line jack (1). Connect the AC adaptor cord (2) by pressing the plug firmly (3).

•Use only the included Panasonic AC adaptor PQLV207V.

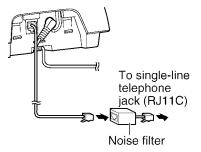

Note:

- The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)
- •The AC adaptor should be connected to a vertically oriented or floor-mounted AC outlet. Do not connect the AC adaptor to a ceiling-mounted AC outlet, as the weight of the adaptor may cause it to become disconnected.
- The unit will not work during a power failure. We recommend connecting a corded telephone to the same telephone line or to the same telephone line jack using a Panasonic T-adaptor.

6.1.2. If you subscribe to a DSL service

Please attach a noise filter (contact your DSL provider) to the telephone line between the base unit and the telephone line jack in the event of the following:

- Noise is heard during conversations.
- Caller ID features do not function properly.

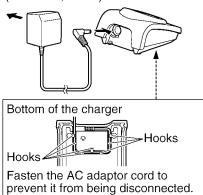

6.2. Setting up the Handset

6.2.1. Connecting the AC adaptor

 \bullet Use only the included Panasonic AC adaptor PQLV209V.

(120 V AC, 60 Hz)

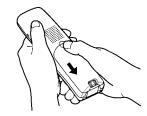

6.3. Battery

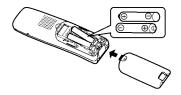

6.3.1. Battery installation/replacement

- 1 Press the notch of the handset cover firmly, and slide it in the direction of the arrow.
 - When replacing batteries, remove the old batteries positive (

) end first.

2 Insert the batteries negative (○) end first. Close the handset cover.

Important:

- USE ONLY Ni-MH batteries AAA (R03) size.
- Do NOT use Alkaline/Manganese/Ni-Cd batteries.
- Install the batteries in proper order (⊕, ⊝), matching the correct polarity.
- •When replacing batteries, we recommend using the Panasonic rechargeable batteries HHR-4DPA.
- Wipe the battery ends (⊕, ⊕) with a dry cloth.
- When installing the batteries, avoid touching the battery ends (⊕, ⊝) or the unit contacts.

Attention:

A nickel metal hydride battery that is recyclable powers the product you have purchased.

Please call 1-800-8-BATTERY (1-800-822-8837) for information on how to recycle this battery.

6.3.2. Battery charge

Place the handset on the base unit or charger for **7 hours** before initial use.

 While charging, "Charging" is displayed and the charge indicator on the handset lights. When the batteries are fully charged, "Charge completed" is displayed.

Base unit:

Charger:

Note

- It is normal for the handset to feel warm during charging.
- If you want to use the handset immediately, charge the batteries for at least 15 minutes.
- •To ensure that the batteries charge properly, clean the charge contacts of the handset, base unit, and charger with a soft, dry cloth once a month. Clean more often if the unit is subject to the exposure of grease, dust, or high humidity.
- When the batteries are empty, the entire display may go blank and "Charging" may not be displayed for about 10 minutes even if you place the handset on the base unit or charger.

Note for service:

The battery strength may not be indicated correctly if the battery is disconnected and connected again, even after it is fully charged. In that case, by recharging the battery as mentioned above, you will get a correct indication of the battery strength.

6.3.3. Battery level

Battery icon	Battery level
(EEE)	Fully charged
	Medium
	Low Flashing: needs to be recharged.

Note:

 When the batteries need to be charged, the handset beeps intermittently during use.

6.3.4. Panasonic battery performance

Operation	Operating time
While in use (talking)	Up to 17 hours
While not in use (standby)	Up to 7.5 days

Note:

- Battery operating time may be shortened over time depending on usage conditions and surrounding temperature.
- Battery power is consumed whenever the handset is off the base unit or charger, even when the handset is not in use.
- After the handset is fully charged, displaying "Charge completed", it may be left on the base unit or charger without any ill effect on the batteries.
- The battery level may not be displayed correctly or the entire display may go blank after you replace the batteries.
 In this case, place the handset on the base unit or charger and let it charge for 7 hours.

7 Operation Instructions

7.1. Programmable Settings

You can customize the unit by programming the following features using the handset.

Programming by scrolling through the display menus

- 1 [MENU]
- 2 Press [V] or [A] to select the desired menu. $\rightarrow [OK]$
 - ullet If there is a sub-menu(s), press [ullet] or [ullet] to select the desired item. igodot [OK]
- **3** Press [V] or [A] to select the desired setting. $\rightarrow [OK]$
 - •This step may vary depending on the feature being programmed.
- 4 [OFF]

Note:

•In the following table, < > indicates the default setting.

Main menu	Sub-menu 1	Sub-menu 2
View Caller ID	_	_

Customer support	_	-

- *1 If you program these settings using one of the handsets, you do not need to program the same item using another handset.
- *2 If you subscribe to a distinctive ring service (such as IDENTA-RING), select a tone (tone 1 to 5). If you select a melody, you cannot distinguish lines by their ringers. The preset melodies in this product are used with permission of © 2006 Copyrights Vision Inc.
- *3 Turn this feature off if you prefer not to hear key tones while you are dialing or pressing any keys, including confirmation tones and error tones.
- *4 If you subscribe to Caller ID service and want to view the caller's information after lifting up the handset to answer a call, turn off this feature.
- *5 This feature allows the unit to automatically adjust the date and time setting when caller information is received. To use this feature, set the date and time first.
- *6 The flash time depends on your telephone exchange or host PBX. Consult your PBX supplier if necessary. The setting should stay at "700ms" unless pressing **[FLASH]** fails to pick up the call waiting call.

7.2. Registering a Handset

The included handset and base unit are preregistered. If for some reason the handset is not registered to the base unit, register the handset.

- 1 Handset: [MENU]
- 2 [V]/[A]: "Handset settings" $\rightarrow [OK]$
- 3 [V]/[A]: "Registration" \rightarrow [OK]
- 4 [▼]/[▲]: "HS registration" \longrightarrow [OK]
- 5 Base unit:

Press and hold [LOCATOR] until the registration tone sounds.

- If all registered handsets start ringing, press [LOCATOR] to stop, then repeat this step.
- After the base unit beeps, the rest of the procedure must be completed within 1 minute and 30 seconds.
- 6 Handset:

Press [OK], then wait until a beep sounds and ♥ stops flashing.

Registering an additional handset

See page 3 for information on the available model. Start from step 5.

7.2.1. Deregistering a handset

- 1 [MENU]
- 2 [V]/[A]: "Handset settings" \rightarrow [OK]
- 3 [V]/[A]: "Registration" \rightarrow [OK]
- 4 [▼]/[▲]: "Deregistration" → [OK]
- 5 [3][3][5] \to [OK]
- 6 Select the handset(s) you want to cancel by pressing the desired handset number ([1] [6]). → [OK]
 - The selected handset number(s) flashes.
 - To cancel a selected handset number, press the number again. The number stops flashing.
- 7 [V]/[A]: "Yes" \longrightarrow [OK]
- 8 After "Deregistered" is displayed, press [OFF].

7.3. Copying Handset Phonebook Items

You can copy one or all of the phonebook items from one handset to another.

Copying all items

- 1 $[m] \rightarrow [MENU]$
- 2 [V]/[A]: "Copy all" \rightarrow [OK]
- 3 Select the handset to copy to by pressing the desired handset number ([1] [6]).
 - When all items have been copied, "Completed" is displayed.
- 4 [OFF]

7.4. Error Messages

If the unit detects a problem, one of the following messages is shown on the display.

Dienlay massage	Cause/solution
Display message	
Busy	 The called handset is in use. The handset you are calling is too far from the base unit. There is no handset registered to the base unit matching the extension number you entered. Other units are in use and the system is busy. Try again later.
Error!!	Recording was too short. Try again.
Failed	The handset you tried to copy phonebook items to is in use. Try again later.
Incomplete	The destination handset's phonebook memory is full. Erase unnecessary items from the destination handset's phonebook.
Memory full	There is no space to store new items in the phonebook. Erase unnecessary items.
Messages full	There is no space in memory to record new messages. Erase unnecessary messages.
No items stored	 Your phonebook, caller list or redial list is empty.
No link to base. Move closer to base, try again.	 The handset has lost communication with the base unit. Move closer to the base unit, and try again. Confirm that the base unit's AC adaptor is plugged in. The handset's registration may have been canceled. Re-register the handset.
Please lift up and try again.	 A handset button was pressed while the handset was on the base unit or charger. Lift the handset and press the button again.
Please set current date & time.	 In order to set the alarm, you must first set the date and time.

7.5. Troubleshooting

General use

Problem	Cause/solution
The unit does not work.	 Make sure the batteries are installed correctly and fully charged. Check the connections. Unplug the base unit's AC adaptor to reset the unit. Reconnect the adaptor and try again. The handset has not been registered to the base unit. Register the handset.
I cannot hear a dial tone.	 Confirm the telephone line cord is properly connected. Disconnect the unit from the telephone line and connect a known working telephone. If the working telephone operates properly, contact our service personnel to have the unit repaired. If the working telephone does not operate properly, contact your telephone service provider.
The indicator on the top right of the handset flashes slowly.	 New messages have been recorded. Listen to the new messages. New Voice Mail messages have been recorded. Listen to the new Voice Mail messages.

Programmable settings

Problem	Cause/solution
I cannot program items.	 Programming is not possible while either the base unit or another handset is being used. Try again later.
While programming, the handset starts to ring.	 A call is being received. Answer the call and start again after hanging up.

Battery recharge

Problem	Cause/solution
I fully charged the batteries, but continues to flash.	 Clean the charge contacts and charge again. The batteries may need to be replaced with a new ones.
I fully charged the batteries, but the operating time seems to be short.	 Wipe the battery ends (⊕, ⊝) and the unit contacts with a dry cloth.
The handset display is blank.	Confirm that the batteries are properly installed.Fully charge the batteries.

Making/answering calls, intercom

Problem	Cause/solution
♥ is displayed, but I cannot make a call.	●The handset and base unit could not communicate for some reason, such as interference from other electrical appliances. Perform the following: — Move the handset and base unit away from other electrical appliances. — Move closer to the base unit.
Static is heard, sound cuts in and out. Interference from other electrical units.	 Move the handset and base unit away from other electrical appliances. Move closer to the base unit. If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details.
The handset does not ring.	●The ringer volume is turned off. Adjust it.
I cannot make a call.	 The dialing mode may be set incorrectly. Change the setting. Another handset is in use. Try again later.
I cannot have a conversation using the headset.	Make sure that an optional headset is connected properly.
I cannot make long distance calls.	 Make sure that you have long distance service.
I cannot page the handset.	 The called handset is too far from the base unit. The called handset is in use. Try again later.

Caller ID

Problem	Cause/solution
The handset does not display the caller's name and/or phone number.	 You have not subscribed to Caller ID service. Contact your telephone service provider to subscribe. If your unit is connected to any additional telephone equipment such as a Caller ID box or cordless telephone line jack, disconnect the unit from the equipment and plug the unit directly into the wall jack. If your unit is connected to a telephone line with DSL service, we recommend connecting a noise filter between the base unit and the telephone line jack. Contact your DSL provider for details. The name display service may not be available in some areas. Contact your telephone service provider for details. Other telephone equipment may be interfering with this unit. Disconnect the other equipment and try again. The caller requested not to send caller information. If a call is being transferred to you, the caller information is not displayed. Generally, caller information is displayed from the 2nd ring.
The caller list/incoming phone numbers are not edited automatically.	 The Caller ID number auto edit feature is turned off. Turn it on and try again. You need to call back the edited number to activate Caller ID number auto edit.
I cannot dial the phone number edited in the caller list.	•The phone number you dialed might have an incorrectly edited pattern (for example, the long distance "1" or the area code is missing). Edit the phone number with another pattern.
The 2nd caller's information is not displayed during an outside call.	● In order to use Caller ID, Call Waiting, or Call Waiting Caller ID (CWID), you must first contact your telephone service provider and subscribe to the desired service. After subscribing, you may need to contact your telephone service provider again to activate this specific service, even if you already subscribed to both Caller ID and Call Waiting with Caller ID services (CWID).

Answering system

Problem	Cause/solution
I cannot listen to messages from a remote location.	 A touch tone phone is required for remote operation. Enter the remote code correctly. The answering system is off. Turn it on.
The unit does not record new messages.	 The answering system is off. Turn it on. The message memory is full. Erase unnecessary messages. If you subscribe to the Voice Mail service, messages are recorded by the telephone service provider not your telephone.
I cannot operate the answering system.	 Someone is operating the answering system. If someone is talking on a conference call, you cannot operate the answering system. Try again later.

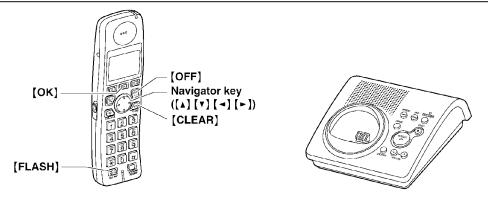

8 Service Mode

8.1. Engineering Mode

8.1.1. Base Unit

Important:

Make sure the address on LCD is correct when entering new data. Otherwise, you may ruin the unit.

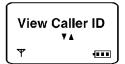

H/S key operation

H/S LCD

- 1). Register a Handset to a Base Unit. (*1)
- 2). Press [OK].
- 3). Select "Base Unit Setup" using [▲]or[▼] then press [OK]or [►].
- 4). Enter "7", "2", "6", "2", "7", "6", "6", "4".

 Note: 7262 7664 = PANA SONI

 (see letters printed on dial keys.)
- 5). Select "Write EEPROM" using [▲]or[▼] then press [OK]or [►].
- 6). Enter "●", "●", "●", "●" (Address). (*2)
- 7). Enter "*", "*" (New Data). (*2)
- 8). Press [OK], a long confirmation beep will be heard.

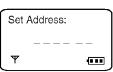

Engineering Mode Read EEPROM ▶Write EEPROM ▼

Press [OFF] to return to standby mode.
 After that, turn the base unit power off and then power on.

Frequently Used Items (Base Unit)

ex.)

Items	Address	Default Data	New Data		Remarks
Frequency	00 01	75	-	-	Use these items in a READ-ONLY mode to
ID	00 10~00 14	Given value	-	-	confirm the contents. Careless rewriting may
					cause serious damage to the computer system.

Note:

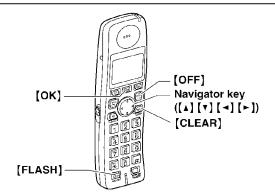

- (*1) Refer to **Registering a Handset** (P.20)
- (*2) When you enter the address or New Data, please refer to the table below.

Desired Number (hex)	Input Keys	Desired Number (hex)	Input Keys
0	0	A	[Flash] + 0
1	1	В	[Flash] + 1
		С	[Flash] + 2
	-	D	[Flash] + 3
	-	E	[Flash] + 4
9	9	F	[Flash] + 5

8.1.2. Handset

Important:

Make sure the address on LCD is correct when entering new data. Otherwise, you may ruin the unit.

H/S key operation

- 1). Press [OK].
- 2). Select "Handset Setup" using [▲]or[▼] then press [OK] or [►].
- 3). Enter "7", "2", "6", "2", "7", "6", "6", "4".

 Note: 7262 7664 = PANA SONI

 (see letters printed on dial keys.)
- Select "Write EEPROM" using [▲]or[▼] then press [OK] or [►].
- 5). Enter "●", "●", "●", "●" (Address). (*1)
- 6). Enter "*", "*" (New Data). (*1)
- 7). Press **[OK]**, a long confirmation beep will be heard.
- 8). Press [OFF] to return to standby mode.

After that, remove and reinsert the batteries. Press the Power button for about 1 second if the power is not turned on.

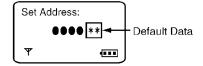

H/S LCD

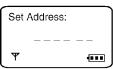

Frequently Used Items (Handset)

ex.)

Items	Address	Default Data	New Data	Possible Adjusted Value MAX (hex)	Possible Adjusted Value MIN (hex)	Remarks
Battery Low	00 04	25	-	-	-	
Frequency	00 01	75	-	-	-	(*2)
ID	00 10~00 14	Given value	-	-	-	

Note:

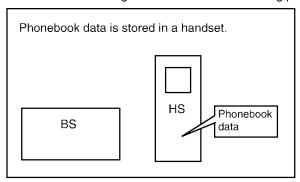

(*1) When you enter the address or New Data, please refer to the table below.

Desired Number (hex.)	Input Keys	Desired Number (hex.)	Input Keys
0	0	A	[Flash] + 0
1	1	В	[Flash] + 1
-		С	[Flash] + 2
		D	[Flash] + 3
		E	[Flash] + 4
9	9	F	[Flash] + 5

^(*2) Use these items in a READ-ONLY mode to confirm the contents. Careless rewriting may cause serious damage to the handset.

8.2. Copying Phonebook Items when Repairing

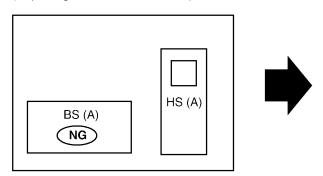

You can copy the handset phonebook to another (compatible Panasonic) handset. This will help to save the original phonebook data which the customer has registered. Refer to the following procedures.

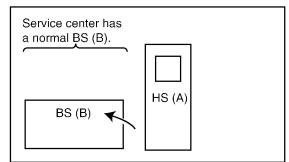

Note: BS=Base unit HS=Handset

Case 1: A base unit has a defect.

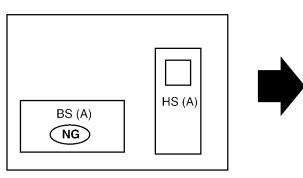

(Replacing a base unit PCB etc...)

 Register HS (A) to BS (B).
 HS (A) is normal, therefore no need to copy the phonebook data.

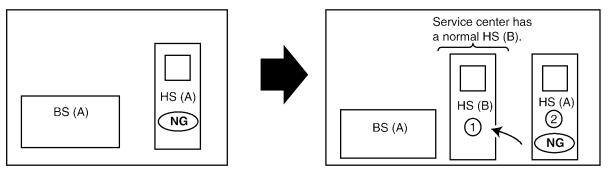

Case 2: A base unit has a defect.
(Replacing both a base unit and a handset)

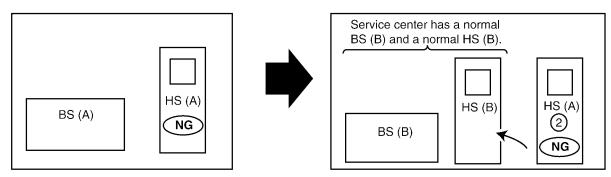

- 1. Register HS (A) to BS (B) as a handset no. 2.
- 2. Copy the phonebook data from HS (A) to HS (B).
- 3. Canceling the HS 2 (HS (A)).

Case 3: A handset has a defect.
(Radio transmission is functioning.)

- 1. Cancel HS (A).
- 2. Register HS (B) as a handset no. 1.
- 3. Register HS (A) as a handset no. 2.
- 4. Copy the phonebook data from HS (A) to HS (B).
- 5. Cancel HS 2 (HS (A)).

Case 4: A handset has a defect.
(Radio transmission is functioning.)

- 1. Register HS (A) as a handset no. 2.
- 2. Copy the phonebook data from HS (A) to HS (B).
- 3. Cancel HS 2 (HS (A)).

Note:

- If the max number of handsets are already registered to the base unit, a new handset cannot be registered.
- To register the handset, refer to **Registering a Handset** (P.20).
- ToTo cancel the handset, refer to **Deregistering a handset** (P.20).
- ToTo copy the handset phonebook, refer to Copying Handset Phonebook Items (P.20).

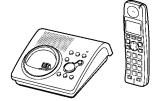

8.3. How to Clear User Setting

Units are reset to the Factory settings by this operation (Erase recorded Voice messages, stored Phone numbers, Caller list and etc.)

Note:

- The reset menus differ depending on the following operations.
- This operation should not be performed for a usual repair.

8.3.1. Resetting both base unit and handset

- (1) Connect the AC adaptor to the base unit and install the charged batteries into the handset.
- ② Confirm the handset is registered to the base unit (Y lights).
 If the handset is not registered to the base unit (Y is flashing), register it. (*1)
- 3 Lift the handset and press [> 0] to put the handset in standby mode.
- 4 Press 1, 5, 9 and (x) keys of the handset simultaneously until a confirmation tone is heard.
- ⑤ Press (2), (5), (8), (0).
- (6) Disconnect the AC adaptor, then remove the battery.

Note:

- (*1) Refer to Registering a Handset (P.20).
- · Handset registration will not be reset.

8.3.2. Resetting only handset

The only handset is reset by doing the following steps ① to ④.

- 1 Install the charged batteries into the handset.
- ② Lift the handset and press [> ①] to put the handset in standby mode.
- ③ Press ③, 5, 7 and # keys of the handset simultaneously until a confirmation tone is heard. (*2)
- A Remove the battery.

Note: (*2)

- The registration of the base unit and the handset are cancelled.
- If the handset needs to be registered to the base unit, refer to Registering a Handset (P.20).
- If users do not bring the base unit with them, the registration procedure has to be done by users themselves.
- · Caller ID data will not be reset.

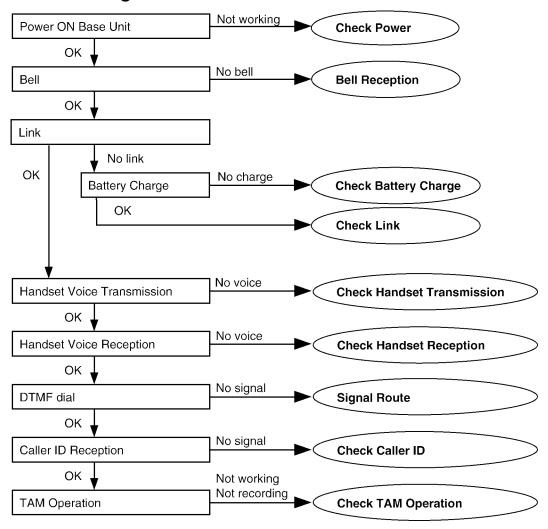

8.3.3. Delete all handset registration of base unit

1) Press and hold [LOCATOR] button for more than 30 seconds.

9.1.4. Check the RF part

9.1.4.1. Finding out the Defective part

- 1. Prepare Regular HS (Handset) and Regular BU (Base unit).
- 2. a. Re-register regular HS (Normal mode) to Base Unit (to be checked). If this operation fails in some ways, the Base Unit is defective.
 - b. Re-register Handset (to be checked) to regular BU (Normal mode). If this operation fails in some ways, the Handset is defective.

After All the Checkings or Repairing

1. Re-register the checked Handset to the checked Base Unit, and Regular HS to Regular BU.

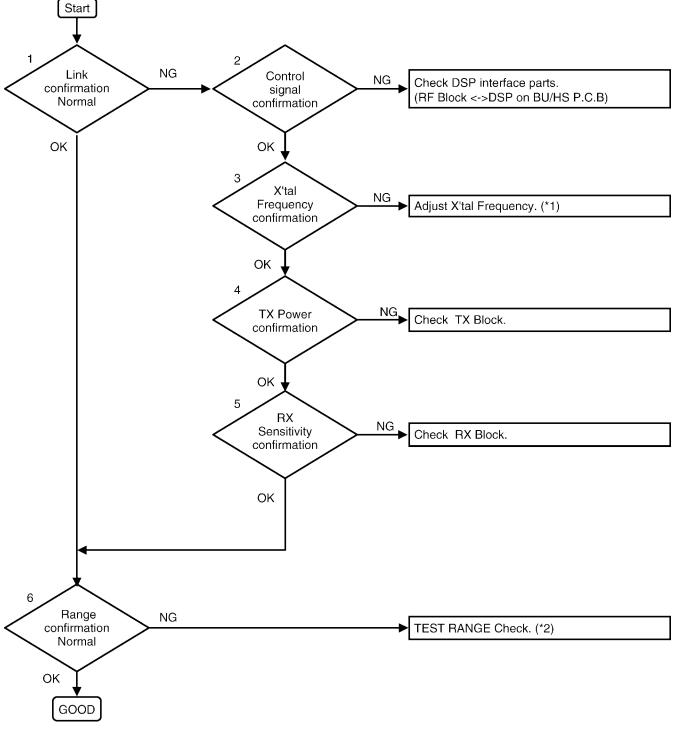

Note:

If you need to register a handset, refer to Registering a Handset (P.20)

9.1.4.2. RF Check Flowchart

Each item (1 \sim 6) of RF Check Flowchart corresponds to **Check Table for RF part** (P.40). Please refer to the each item.

Note:

9.1.8.2. Handset

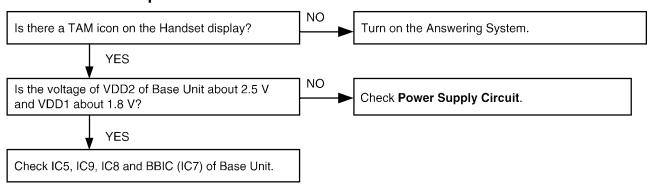

Cross Reference:

Telephone Line Interface (P.9)

Check Link (P.36)

How to Check the Handset Speaker or Receiver (P.65)

9.1.9. Check TAM Operation

A) How to change the Auto Disconnect activation (time)

Some Telephone Company lines (fiber or cable) ON Hook and OFF Hook voltages are lower than conventional lines, which may cause a malfunction of Auto Disconnect detection. To solve this problem, try changing the Auto Disconnect activation through the procedures below.

Auto Disconnect detect	PROCEDURE at Stand-by mode
Enable*1 [default]	"STOP" + "ANSWER" + "SKIP" simultaneously
Disable*2	"STOP" + "ANSWER" + "REPEAT" simultaneously

Note:

- *1 Auto Disconnect doesn't detect for the first 2 seconds.
- *2 If the "Disable" is selected, even if the parallel-connected telephone is OFF HOOK, the line isn't disconnected.

B) How to change the VOX level

It makes easier to detect a small voice (caller) by raising the sensitivity of VOX level. Therefore, the recording of TAM is not turned off during a detection.

VOX Level sensitivity	PROCEDURE
Normal [default]	"STOP" + "LOCATOR" + "REPEAT" simultaneously
6 dB Up	"STOP" + "LOCATOR" + "SKIP" simultaneously

Cross Reference:

Power Supply Circuit (P.8)

9.2. Troubleshooting by Symptom (Base Unit and Charger Unit)

9.2.1. Check Point (Base Unit)

Please follow the items below after repairing.

Note:

After the measuring, suck up the solder of TP.

*: **PC Setting** (P.56) is required beforehand.

The connections of simulator equipments are as shown in Adjustment Standard (Base Unit) (P.58).

	Items	Check	Procedure	Check or
		Point		Replace Parts
(A)	3.3 V Supply Confirma-	VDD3	1. Confirm that the voltage between test point VDD3 and GND is 3.3 V \pm 0.2 V.	IC1, C30, C32,
	tion			R38, R39, C36,
				C37
(B)	2.5 V Supply Confirma-	VDD2	1. Confirm that the voltage between test point VDD2 and GND is $2.5 \text{ V} \pm 0.2 \text{ V}$.	Q9, C70, C71
	tion			
(C)	1.8 V Supply Confirma-	VDD1	1. Confirm that the voltage between test point VDD1 and GND is 1.8 V ± 0.1 V.	Q8, R72, D12,
	tion			C68
(D)*	BBIC Clock Adjustment	CLK	1. Input Command "rdeeprom 00 01 01", then you can confirm the current value.	IC10, C111,
			2. Adjust the frequency of CLK executing the command "setfreq xx (where xx is	C112, X1, R73,
			the value)" so that the reading of the frequency counter is 10.368000 MHz \pm 10 Hz.	C62, C63

9.3. Troubleshooting by Symptom (Handset)

9.3.1. Check Point (Handset)

Please follow the items below after repairing.

Note:

After the measuring, suck up the solder of TP.

The connections of adjustment equipments are as shown in Adjustment Standard (Handset) (P.63).

	Items	Check	Procedure	Check or
		Point		Replace Parts
(A)*	1.8 V Supply Adjustment	1.8 V	1. Confirm that the voltage between test point 1.8 V and GND is 1.8 V \pm 0.02 V.	IC1, Q2, C10
			2. Execute the command "bandgap", then check the current value.	
			Adjust the 1.8V voltage of VDD1 executing command "bandgap XX"(XX is the value).	
(B)	DC/DC Supply Confir-	3.3 V	1. Confirm that the voltage between test point 3.3 V and GND is 3.3 V ± 0.3 V	IC1, F1, C1,

	Charge Current Monitor		rent limit to 250 mA.	Q9, D6, D7,
	Check		Confirm that the current limit LED of DC power supply is ON/OFF.	D8, L4,
			Decrease current limit of DC power supply to 100mA.	L5, R5, R6,
			 Confirm that the current limit LED of DC power supply is stable. (Current limiter is ON.) 	R7, R8, F1
			(If charge control cannot be confirmed by this procedure, please use battery to hand- set power supply and try again.)	
(E)	Battery Low Confirma-	-	1. Apply 2.40 V between BATT(+) and BATT(-).	IC1, F1, C1
	tion		Confirm that there is no flashing of Battery Icon.	C3, R12
			3. Apply 2.25 V ± 0.08 V between BATT(+) and BATT(-).	
			Confirm that there is flashing of Battery Icon.	
(F) *	BBIC Clock Adjustment	CLK	1. Apply 2.6 V between BATT(+) and BATT(-) with DC power.	IC1, X1, C6,
			2. Execute the command "conttx".	C7, R19,
			3. Input Command "rdeeprom 00 01 01", then you can confirm the current value.	IC4, C57
			4. Adjust the frequency of CLK executing the command "setfreq xx (where xx is	
			the value)" so that the reading of the frequency counter is 10.368000 MHz \pm 10 Hz.	
			Note:	
			CLK is displayed only for a few seconds when executing the command "conttx" after battery is inserted.	

^{*:} Batch file Settings (P.62) is required beforehand.

9.4. How to Replace the Flat Package IC

Even if you do not have the special tools (for example, a spot heater) to remove the Flat IC, with some solder (large amount), a soldering iron and a cutter knife, you can easily remove the ICs that have more than 100 pins.

9.4.1. Preparation

- PbF (: Pb free) Solder
- Soldering Iron

Tip Temperature of 700 °F \pm 20 °F (370 °C \pm 10 °C)

Note: We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

• Flux

Recommended Flux: Specific Gravity \rightarrow 0.82. Type \rightarrow RMA (lower residue, non-cleaning type)

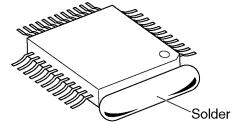

Note: See About Lead Free Solder (Pbf: Pb free) (P.4)

9.4.2. How to Remove the IC

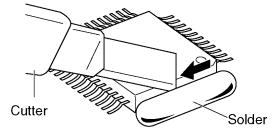

1. Put plenty of solder on the IC pins so that the pins can be completely covered.

Note

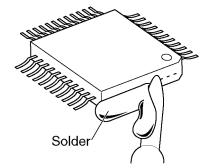

If the IC pins are not soldered enough, you may give pressure to the P.C. board when cutting the pins with a cutter.

2. Make a few cuts into the joint (between the IC and its pins) first and then cut off the pins thoroughly.

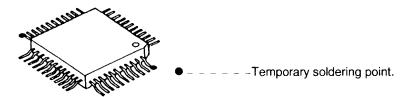

3. While the solder melts, remove it together with the IC pins.

When you attach a new IC to the board, remove all solder left on the board with some tools like a soldering wire. If some solder is left at the joint on the board, the new IC will not be attached properly.

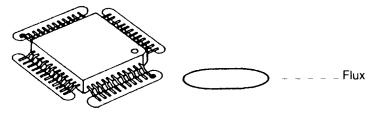

9.4.3. How to Install the IC

1. Temporarily fix the FLAT PACKAGE IC, soldering the two marked pins.

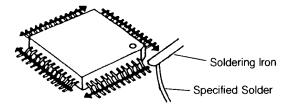

*Check the accuracy of the IC setting with the corresponding soldering foil.

2. Apply flux to all pins of the FLAT PACKAGE IC.

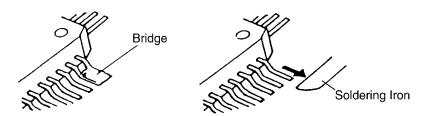

3. Solder the pins, sliding the soldering iron in the direction of the arrow.

9.4.4. How to Remove a Solder Bridge

- 1. Lightly resolder the bridged portion.
- 2. Remove the remaining solder along the pins using a soldering iron as shown in the figure below.

9.5. How to Replace the LLP (Leadless Leadframe Package) IC

9.5.1. Preparation

- PbF (: Pb free) Solder
- · Soldering Iron

Tip Temperature of 700°F ± 20°F (370°C ± 10°C)

Note:

We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

· Hot Air Desoldering Tool

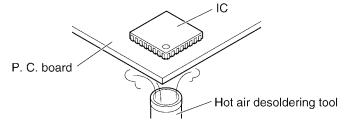

Temperature: 608°F ± 68°F (320°C ± 20°C)

9.5.2. Caution

- To replace the IC efficiently, choose the right sized nozzle of the hot air desoldering tool that matches the IC package.
- Be careful about the temperature of the hot air desoldering tool not to damage the PCB and/or IC.

9.5.3. How to Remove the IC

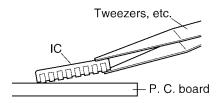

1. Heat the IC with a hot air desoldering tool through the P. C. board.

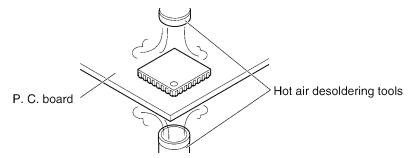

2. Pick up the IC with tweezers, etc. when the solder is melted completely.

Note:

• Be careful not to touch the peripheral parts with tweezers, etc. They are unstable.

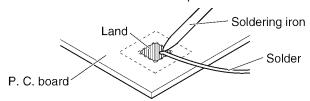

When it is hard to melt the solder completely, heat it with a hot air desoldering tool through the IC besides through the P. C. board.

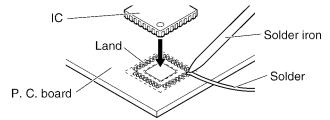

3. After removing the IC, clean the P. C. board of residual solder.

9.5.4. How to Install the IC

1. Place the solder a little on the land where the radiation GND pad on IC bottom is to be attached.

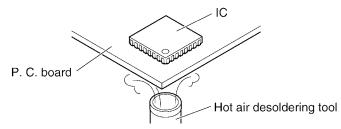

- Place the solder a little on the land where IC pins are to be attached, then place the IC.Note:
 - When placing the IC, the positioning should be done very carefully.

- 3. Heat the IC with a hot air desoldering tool through the P. C. board until the solder on IC bottom is melted.

 Note:
- Be sure to place it precisely, controlling the air volume of the hot air desoldering tool.

4. After soldering, confirm there are no short and open circuits with visual inspection.

9.5.5. How to Remove a Solder Bridge

When a Solder Bridge is found after soldering the bottom of the IC, remove it with a soldering iron.

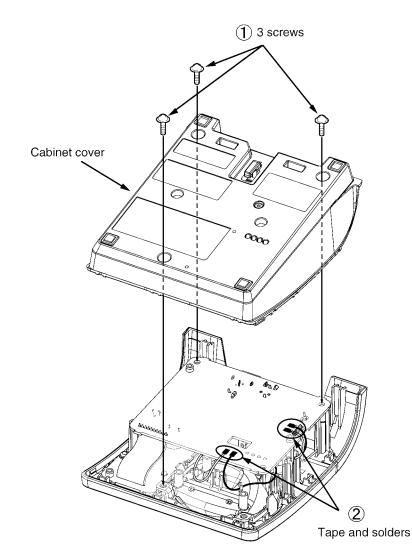

10 Disassembly and Assembly Instructions

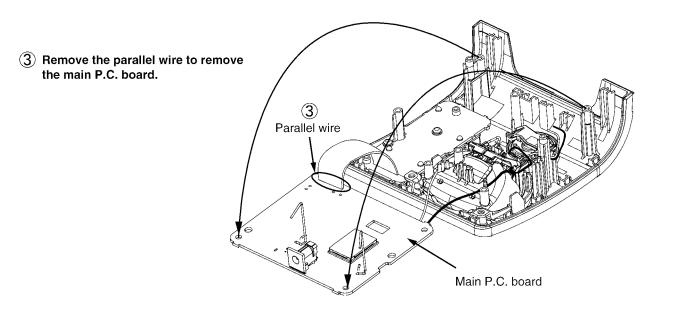

10.1. Disassembly Instructions

10.1.1. Base Unit

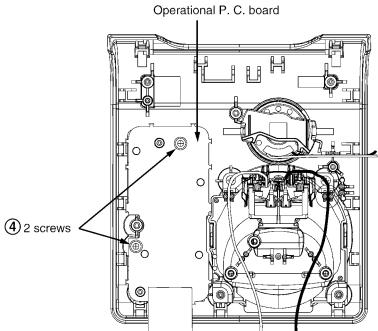

(1) Remove the 3 screws to remove the cabinet cover.

2 Remove the tape and the solders.

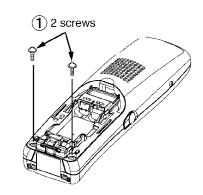

4 Remove the 2 screws to remove the operational P. C. board.

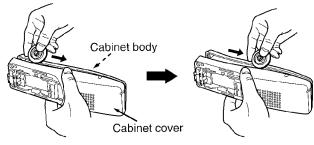

10.1.2. Handset

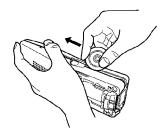

(1) Remove the 2 screws.

2 Insert a JIG (PQDJ10006Y) between the cabinet body and the cabinet cover, then pull it along the gap to open the cabinet.

3 Likewise, open the other side of the cabinet.

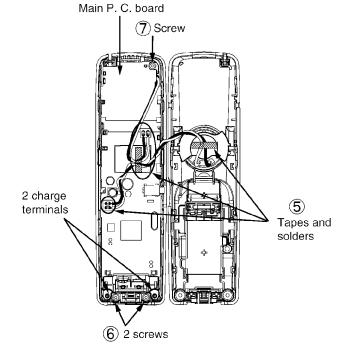

(4) Remove the cabinet cover by pushing it upward.

(5) Remove the tapes and the solders.

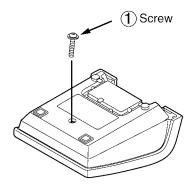

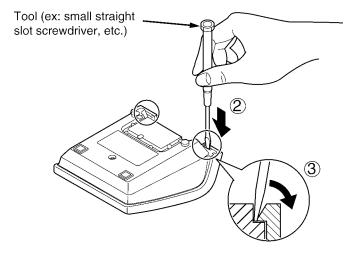

(7) Remove the screw to remove the main P. C. board.

10.1.3. Charger Unit

1 Remove the screw.

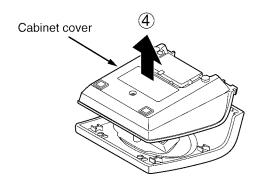

2 Put the tool in the hook.

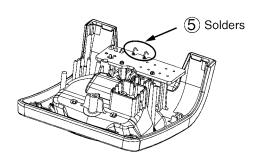

(3) Detach the hook following the picture.
Detach the another hook in the same way.

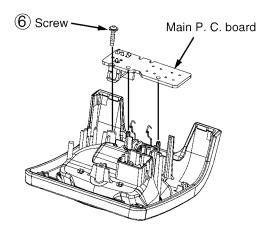

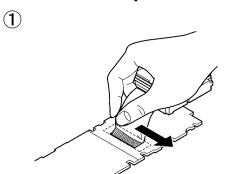

(5) Remove the solders of antennas.

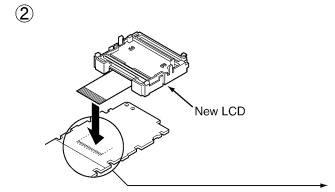

6 Remove the screw to remove the main P.C. board.

10.2. How to Replace the Handset LCD

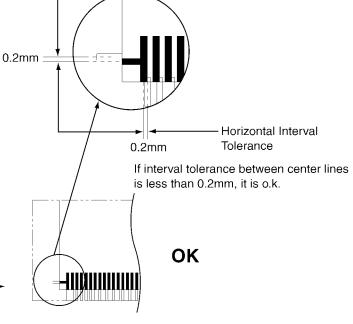

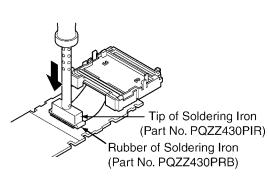

Peel off the FFC (Flexible Flat Cable) from the LCD, in the direction of the arrow. Take care to ensure that the foil on the P.C. board is not damaged.

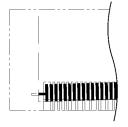

Fit the heatseal of a new LCD.

3

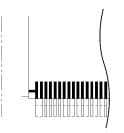

Heatweld with the tip of the soldering iron about 5 to 8 seconds (in case of 60W soldering iron).

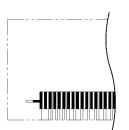

Vertical Interval Tolerance

> NG (Inclined)

NG

(Vertical interval tolerance is more than 0.2mm.)

NG

(Horizontal interval tolerance is more than 0.2mm.)

11 Measurements and Adjustments

11.1. The Setting Method of JIG (Base Unit)

11.1.1. Preparation

11.1.1.1. Equipment Required

- Frequency counter: It must be precise enough to measure intervals of 1 Hz (precision; ±4 ppm). Hewlett Packard, 53131A is recommended.
- Digital multi-meter (DMM): it must be able to measure voltage and current.
- Oscilloscope

11.1.1.2. JIG and PC

Serial JIG

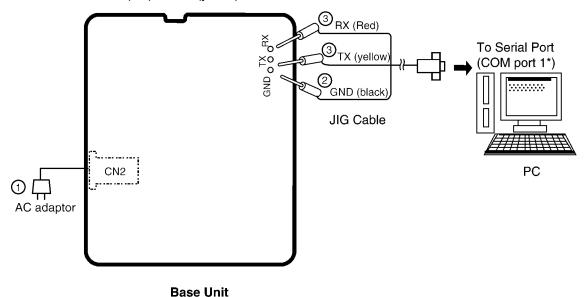

JIG Cable: PQZZ1CD300E
• PC which runs in DOS mode

• Batch file CD-ROM for setting: PQZZTG1032M

11.1.2. PC Setting

11.1.2.1. Connections

- ① Connect the AC adaptor to CN2 (base unit).
- ② Connect the JIG Cable GND (black).
- 3 Connect the JIG Cable RX (red) and TX (yellow).

Note:

*: COM port names may vary depending on what your PC calls it.

11.1.2.2. Batch file Settings

- Insert the Batch file CD-ROM into CD-ROM drive and copy PQZZTG**** folder to your PC (example: D drive).
- 2. Open an MS-DOS mode window.

<Example for Windows>

On your computer, click [Start], select Programs

(All Programs for Windows XP/Windows Server 2003), then click

MS-DOS Prompt. (for Windows 95/Windows 98)

Or

Accessories-MS-DOS Prompt. (for Windows Me)

Or

Command Prompt. (for Windows NT 4.0)

Or

Accessories-Command Prompt.

(for Windows 2000/Windows XP/Windows Server 2003)

- **3.** At the DOS prompt, type "D:" (for example) to select the drive, then press the **Enter** key.
- **4.** Type "CD \(\text{PQZZTG****"}\), then press the **Enter** key.
- 5. Type "SET_COM=X", then press the Enter key
- (X: COM port number used for the serial connection on your PC).
- 6. Type "READID", then press the Enter key.
 - •If any error messages appear, change the port number or check the cable connection.
 - •If any value appear, go to next step.
- **7.** Type "DOSKEY", then press the Enter key.

<Example: correct setting>

- C: ¥Documents and Settings>D:
- D: ¥>CD ¥PQZZTG****
- D: ¥PQZZTG**** >SET_COM=X
- D: ¥PQZZTG****>READID
- 00 52 4F A8 A8
- D: ¥PQZZTG****>DOSKEY
- D: ¥PQZZTG****>_

<Example: incorrect setting>

C: ¥Documents and Settings>D:

D: ¥>CD ¥PQZZTG****

D: ¥PQZZTG**** >SET_COM=X

D: ¥PQZZTG****>READID CreateFile error

ERROR 10: Can't open serial port

D: ¥PQZZTG ****>_

Note:

"****" varies depending on the country.

11.1.2.3. Commands

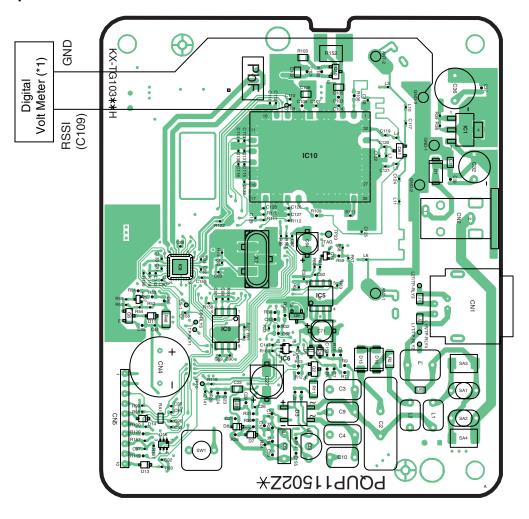

See the table below for frequently used commands.

Command name	Function	Example
rdeeprom	Read the data of EEPROM	Type "rdeeprom 00 00 FF", and the data from address "00 00" to "FF" is read out.
readid	Read ID (RFPI)	Type "readid", and the registered ID is read out.
writeid	Write ID (RFPI)	Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E 98" is written.
setfreq	Adjust Frequency of RFIC	Type "setfreq nn".
hookoff	Off-hook mode on Base	Type "hookoff".
hookon	On-hook mode on Base	Type "hookon".
getchk	Read checksum	Type "getchk".
wreeprom	Write the data of EEPROM	Type "wreeprom 01 23 45". "01 23" is address and "45" is data to be written.
bursttx	Burst TX mode	Type "bursttx"
testrx	Test RX mode	Type "testrx"
tph	High TX power	Type "tph"
tpl	Low TX power	Type "tpi"

11.2. Adjustment Standard (Base Unit)

When connecting the simulator equipment for checking, please refer to below.

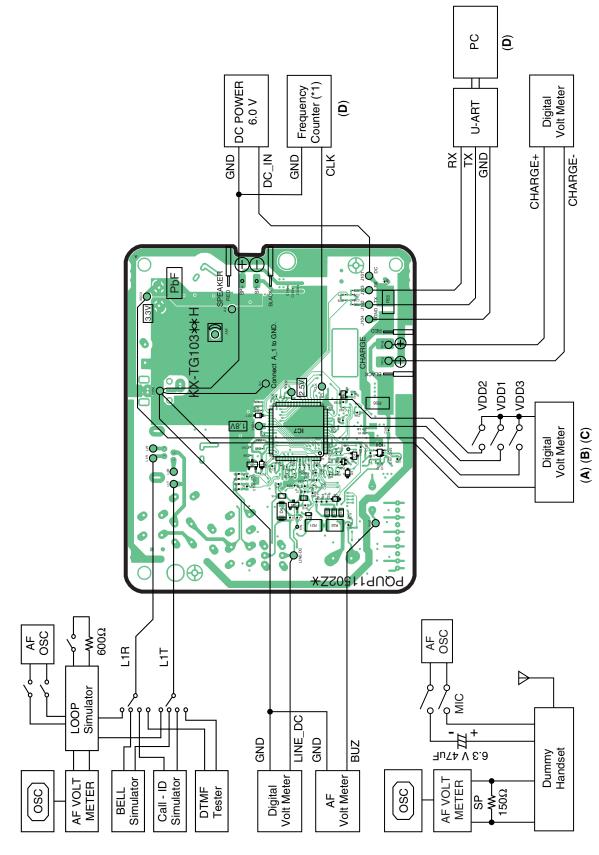

11.2.1. Component View

Note:

(*1) is referred to No.4, 5 of Check Table for RF part (P.40)

11.2.2. Flow Solder Side View

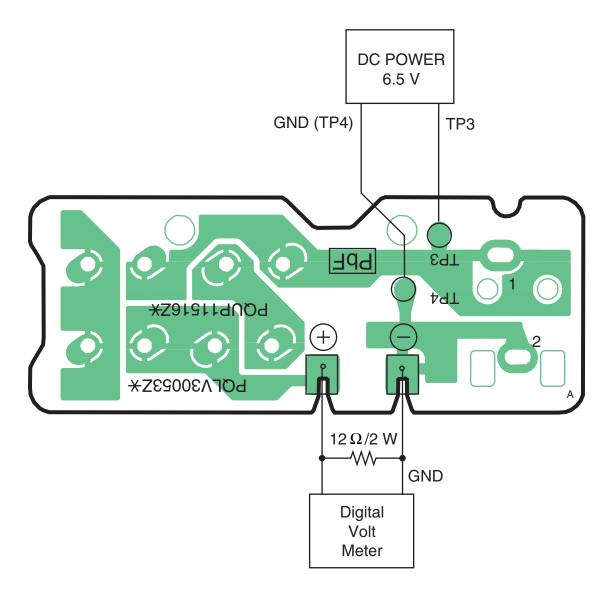

Note:

- (A) (D) is referred to Check Point (Base Unit) (P.45)
- (*1) is referred to No.3 of Check Table for RF part (P.40)

11.3. Adjustment Standard (Charger Unit)

When connecting the simulator equipment for checking, please refer to below.

11.3.1. Flow Solder Side View

11.4. The Setting Method of JIG (Handset)

11.4.1. Preparation

11.4.1.1. Equipment Required

- Frequency counter: It must be precise enough to measure intervals of 1 Hz (precision; ±4 ppm). Hewlett Packard, 53131A is recommended.
- DC power: it must be able to output at least 1 A current under 2.4 V for Handset.
- Digital multi-meter (DMM): it must be able to measure voltage and current.
- Oscilloscope

11.4.1.2. JIG and PC

• Serial JIG

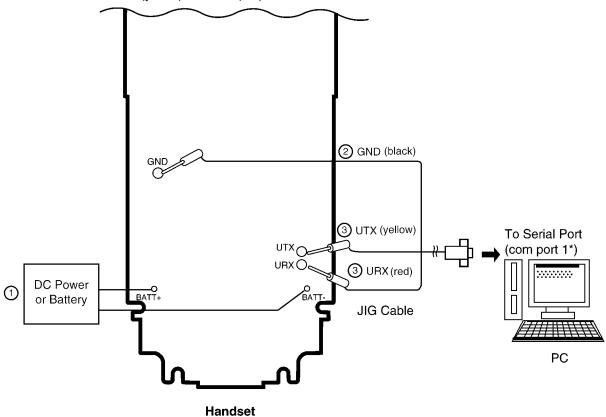

JIG Cable: PQZZ1CD300E

- PC which runs in DOS mode.
- Batch file CD-ROM for setting: PQZZTG1032M

11.4.2. PC Setting

11.4.2.1. Connections

- ① Connect the DC Power or Battery to BATT+ and BATT- (Handset).
- ②Connect the JIG cable GND (black).
- (3) Connect the JIG cable UTX (yellow) and URX (red).

Note:

^{*:} Com port names may vary depending on what your PC calls it.

11.4.2.2. Batch file Settings

- **1.** Insert the Batch file CD-ROM into CD-ROM drive and copy PQZZTG***** folder to your PC (example: D drive).
- 2. Open an MS-DOS mode window.

<Example for Windows>

On your computer, click [Start], select Programs
(All Programs for Windows XP/Windows Server 2003),
then click

MS-DOS Prompt. (for Windows 95/Windows 98)

Accessories-MS-DOS Prompt. (for Windows Me)

Command Prompt. (for Windows NT 4.0)

Or

Accessories-Command Prompt.

(for Windows 2000/Windows XP/Windows Server 2003)

- **3.** At the DOS prompt, type "D:" (for example) to select the drive, then press the **Enter** key.
- **4.** Type "CD \text{\text{PQZZTG******}}, then press the **Enter** key.
- Type "SET RTX_COM=X", then press the Enter key
 COM port number used for the serial connection on your PC).
- **6.** Type "READID", then press the Enter key.
 - •If any error messages appear, change the port number or check the cable connection.
 - •If any value appear, go to next step.
- 7. Type "DOSKEY", then press the Enter key.

<Example: correct setting>

- C: ¥Documents and Settings>D:
- D: ¥>CD ¥PQZZTG*****
- D: ¥PQZZTG***** >SET RTX_COM=X
- D: ¥PQZZTG*****>READID
- 00 52 4F A8 A8
- D: ¥PQZZTG*****>DOSKEY
- D: ¥PQZZTG*****> _

<Example: incorrect setting>

- C: ¥Documents and Settings>D:
- D: ¥>CD ¥PQZZTG*****
- D: \pmy PQZZTG***** > SET RTX_COM=X
- D: ¥PQZZTG*****>READID CreateFile error

ERROR 10: Can't open serial port

D: ¥PQZZTG*****> _

Note:

• "****" varies depending on the country.

11.4.2.3. Commands

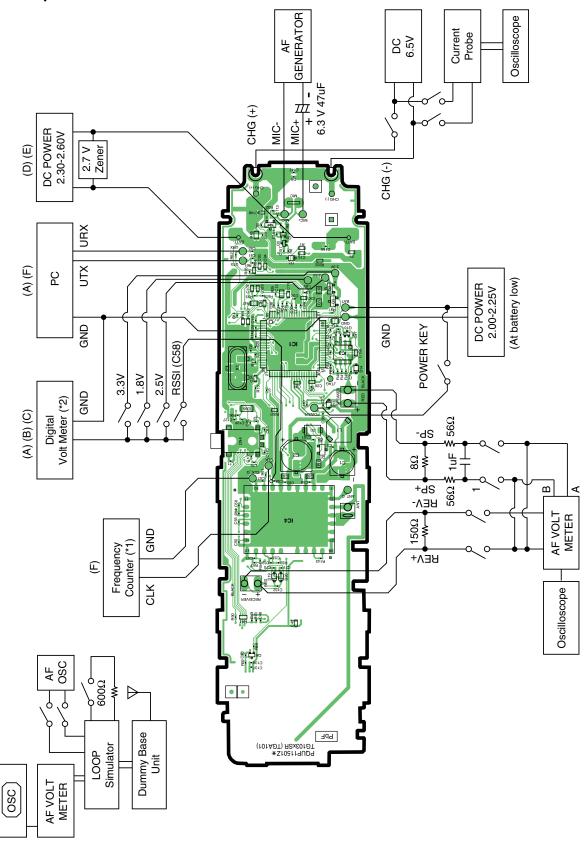

See the table below for frequently used commands.

Command name	Function	Example
rdeeprom	Read the data of EEPROM	Type "rdeeprom 00 00 FF", and the data from address
		"00 00" to "FF" is read out.
readid	Read ID (RFPI)	Type "readid", and the registered ID is read out.
writeid	Write ID (RFPI)	Type "writeid 00 18 E0 0E 98", and the ID "0018 E0 0E
		98" is written.
setfreq	Adjust Frequency of RFIC	Type "setfreq nn".
getchk	Read checksum	Type "getchk".
wreeprom	Write the data of EEPROM	Type "wreeprom 01 23 45". "01 23" is address and "45"
		is data to be written.
bursttx	Burst TX mode	Type "bursttx"
testrx	Test RX mode	Type "testrx"
tph	High TX power	Type "tph"
tpl	Low TX power	Type "tpl"

11.5. Adjustment Standard (Handset)

When connecting the simulator equipment for checking, please refer to below.

11.5.1. Component View

Note:

- (A) (F) is referred to Check Point (Handset) (P.45)
- (*1) is referred to No.3 of Check Table for RF part (P.40)
- (*2) is referred to No.4, 5 of Check Table for RF part (P.40)

11.6. Things to Do after Replacing IC or X'tal

Cautions:

Some of the content on this page may not apply to models from some countries. The contents below are the minimum adjustments required for operation.

11.6.1. Base Unit

Before making the following adjustment, ensure you have carried out PC Setting (P.56) in The Setting Method of JIG (Base Unit).

	Items	Necessary Adjustment
BBIC	Programs for Voice processing, interface for RF and	Clock adjustment: Refer to Check Point (D). (*1)
(IC7)	EEPROM	
EEPROM	Adjustment parameter data	
(IC5)	(country version batch file, default batch file, etc.)	
X'tal (X1)	System clock	

Note:

(*1) Refer to Check Point (Base Unit) (P.45)

11.6.2. Handset

Before making the following adjustment, ensure you have carried out **PC Setting** (P.61) in **The Setting Method of JIG (Handset)**.

	Items	Necessary Adjustment
BBIC	Programs for Voice processing, interface for RF and	Clock adjustment: Refer to Check Point (F). (*2)
(IC1)	EEPROM	2. 1.8 V setting and battery low detection: Refer to Check
		Point (A), (B) and (C). (*2)
EEPROM	Adjustment parameter data	
(IC3)	(country version batch file, default batch file, etc.)	
X'tal (X1)	System clock	

Note:

(*2) Refer to Check Point (Handset) (P.45)

11.7. How to Check the Handset Speaker or Receiver

- 1. Prepare the digital voltmeter, and set the selector knob to ohm meter.
- 2. Put the probes at the speaker terminals as shown below.

11.8. Frequency Table (MHz)

	BASE UNIT		HANDSET	
Channel No	Transmit Frequency	Receive Frequency	Transmit Frequency	Receive Frequency
0	1928.448	1928.448	1928.448	1928.448
1	1926.720	1926.720	1926.720	1926.720
2	1924.992	1924.992	1924.992	1924.992
3	1923.264	1923.264	1923.264	1923.264
4	1921.536	1921.536	1921.536	1921.536

Note:

Channel No. 2: In the Test Mode on Base Unit and Handset.

12 Schematic Diagram

12.1. For Schematic Diagram

12.1.1. Base Unit (Schematic Diagram (Base Unit_Main))

Notes:

1. DC voltage measurements are taken with voltmeter from the negative voltage line.

Important Safety Notice:

Components identified by \triangle mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

2. The schematic diagrams may be modified at any time with the development of new technology.

12.1.2. Handset (Schematic Diagram (Handset))

Notes:

- 1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
- 2. The schematic diagram may be modified at any time with the development of new technology.

12.1.3. Charger Unit (Schematic Diagram (Charger Unit))

Notes:

1. DC voltage measurements are taken with voltmeter from the negative voltage line.

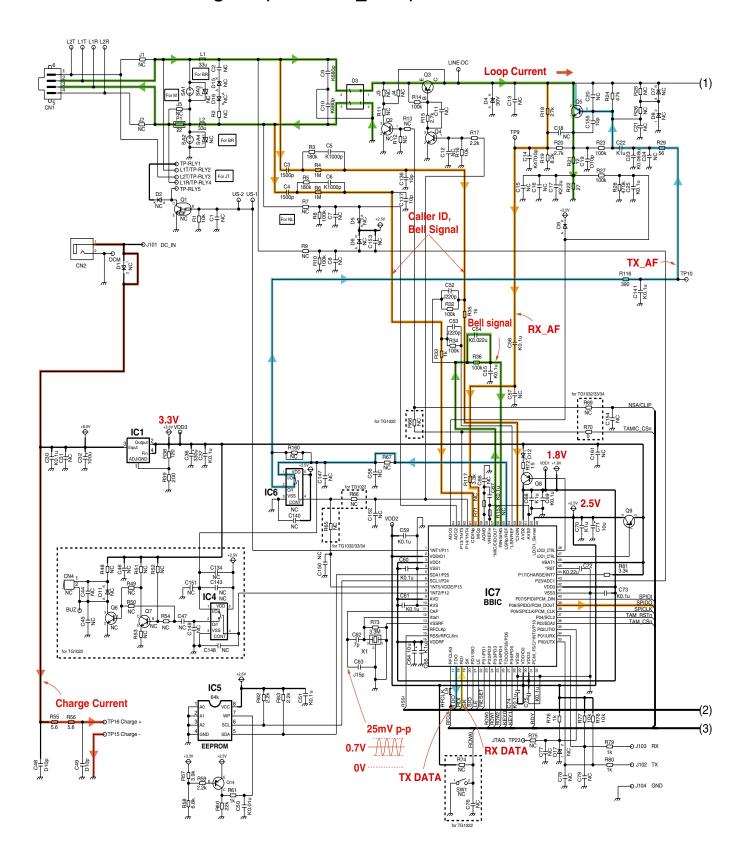

Important Safety Notice:

Components identified by \triangle mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

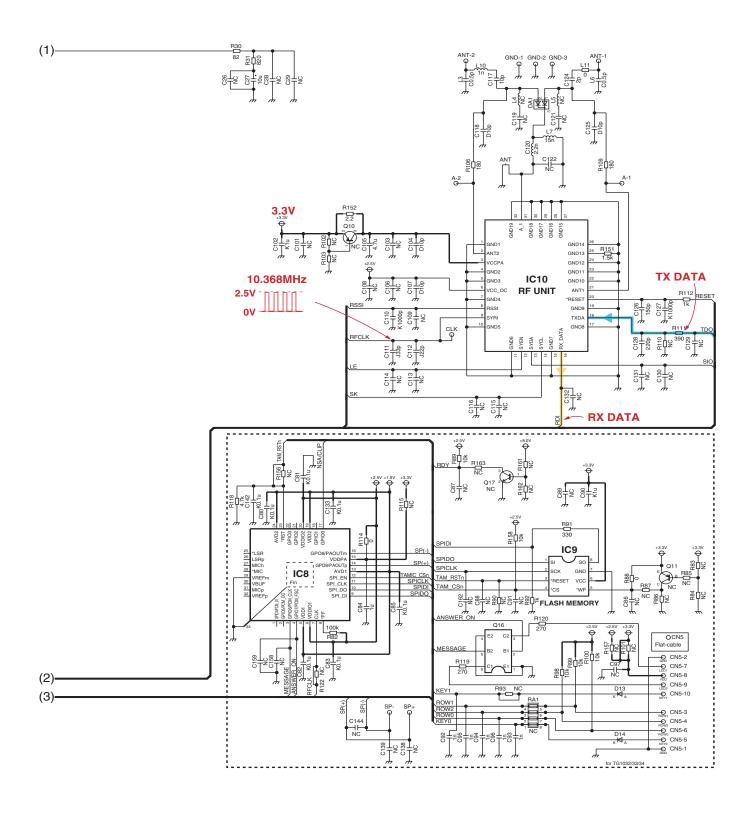

2. The schematic diagram may be modified at any time with the development of new technology.

14.3.1. Base Unit

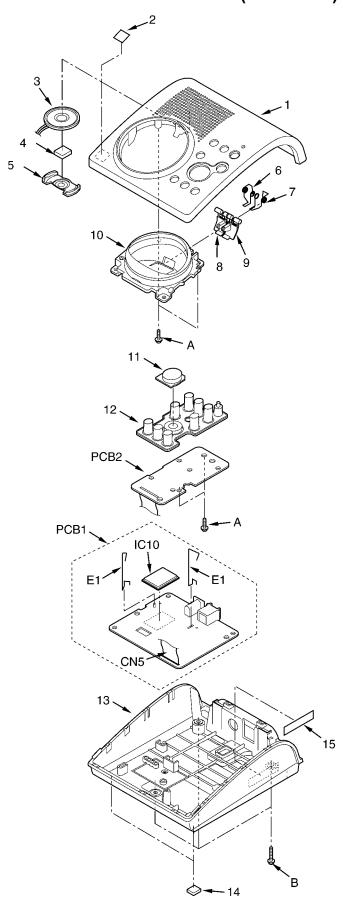

14.3.2. Handset

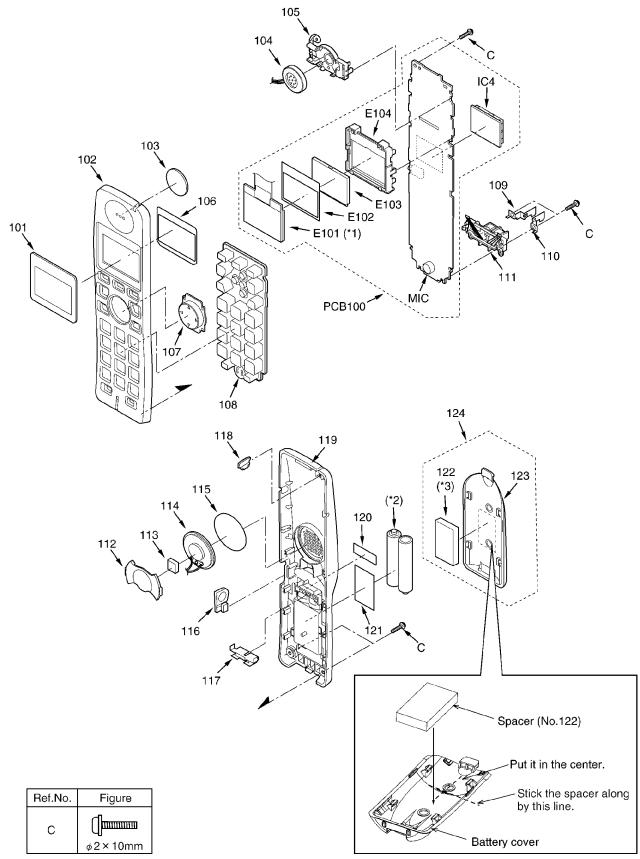

15 Exploded View and Replacement Parts List

15.1. Cabinet and Electric Parts (Base Unit)

Ref.No.	Figure
А	∫□ □ □ □ □ □ □ □ □ □
В	(μιπιπιπ) φ2.6 × 12mm

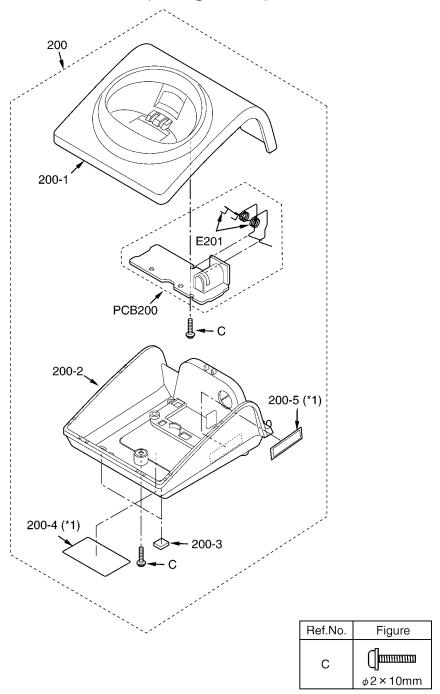

15.2. Cabinet and Electric Parts (Handset)

Note:

- (*1) This cable is fixed by welding. Refer to **How to Replace the Handset LCD** (P.55).
- (*2) The rechargeable Ni-MH battery HHR-4DPA (Capacity: up to 550 mAh) is available through sales route of Panasonic.
- (*3) Attach the spacer (No. 122) to the exact location described above.

15.3. Cabinet and Electric Parts (Charger Unit)

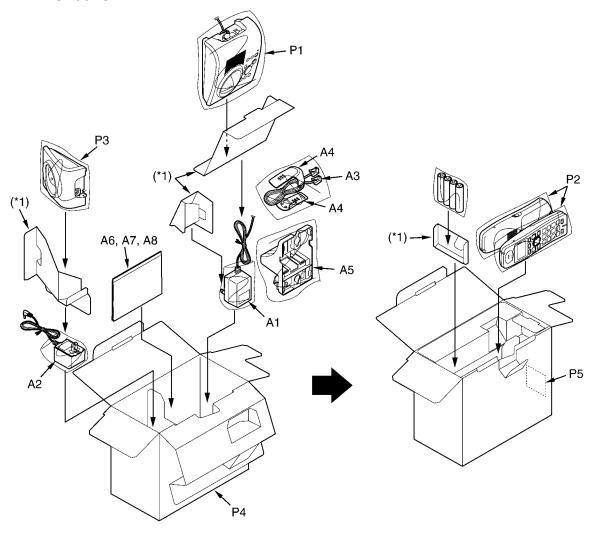

Note:

(*1) for KX-TGA101S

15.4. Accessories and Packing Materials

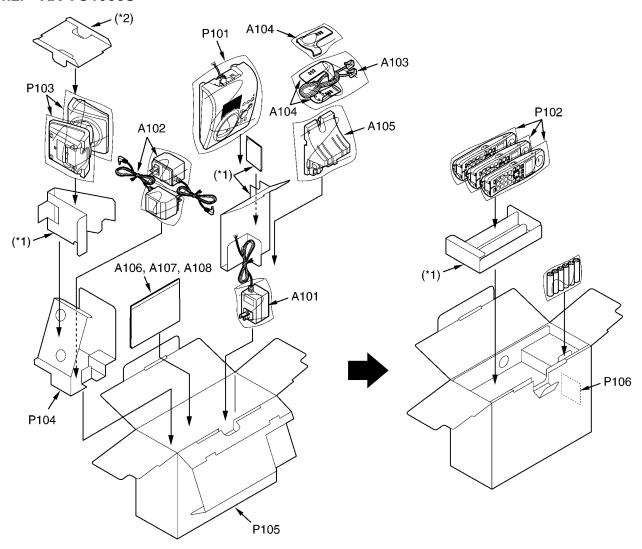

15.4.1. KX-TG1032S

Note:

(*1) These pads are pieces of Ref No. P4 (GIFT BOX).

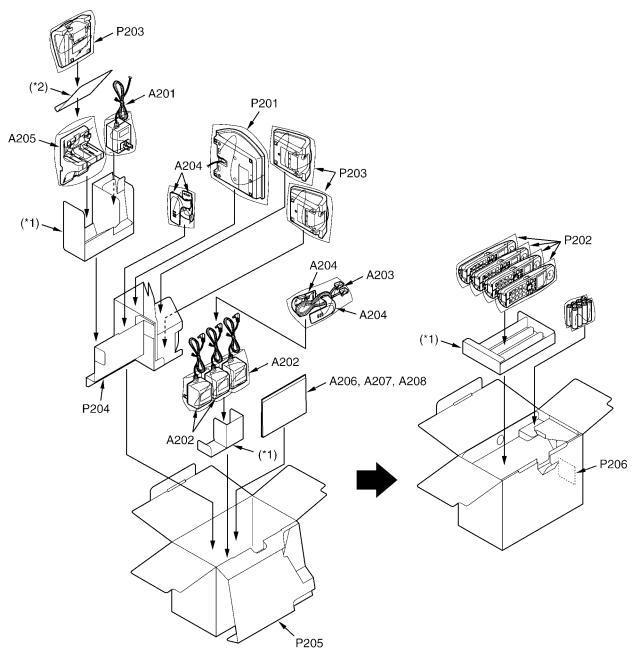

15.4.2. KX-TG1033S

Note:

- (*1) These pads are pieces of Ref No. P104 (CUSHION).
- (*2) This pad is a piece of Ref No. P105 (GIFT BOX).

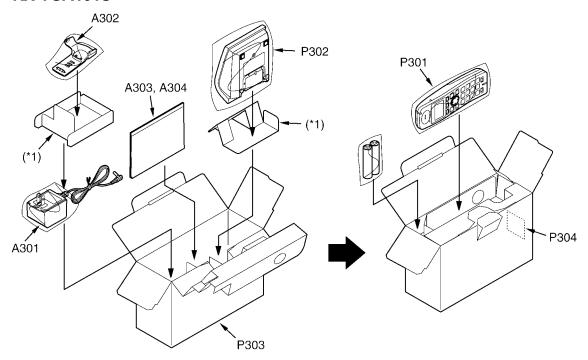

15.4.3. KX-TG1034S

Note:

- (*1) These pads are pieces of Ref No. P204 (CUSHION).
- (*2) This pad is a piece of Ref No. P205 (GIFT BOX).

15.4.4. KX-TGA101S

Note:

(*1) These pads are pieces of Ref No. P303 (GIFT BOX).

15.5. Replacement Part List

1. RTL (Retention Time Limited)

Note:

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the \triangle mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

- 3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.
- ISO code (Example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.
- 5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms ($\Omega)$ K=1000 $\!\Omega,$ M=1000k $\!\Omega$

All capacitors are in MICRO FARADS (μF)P=μμF

*Type & Wattage of Resistor

15.5.2.2. Main P.C.Board Parts

Note:

(*1) When replacing IC1, IC3 or X1, make the adjustment using PQZZTG1032M. Refer to $\bf Handset$ (P.64) of $\bf Things$ to $\bf Do$ after $\bf Replacing$ IC or $\bf X'tal$.

(*2) When replacing the Handset LCD, See **How to** Replace the Handset LCD (P.55).
